

# Field Asset Management System

The simple all-in-one asset tracking solution for the ITS industry aimed at improving performance, reducing cost, and facilitating collaboration.

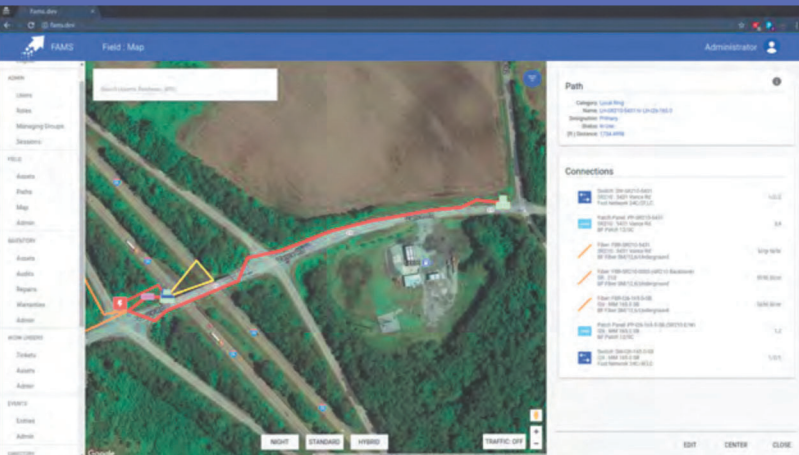

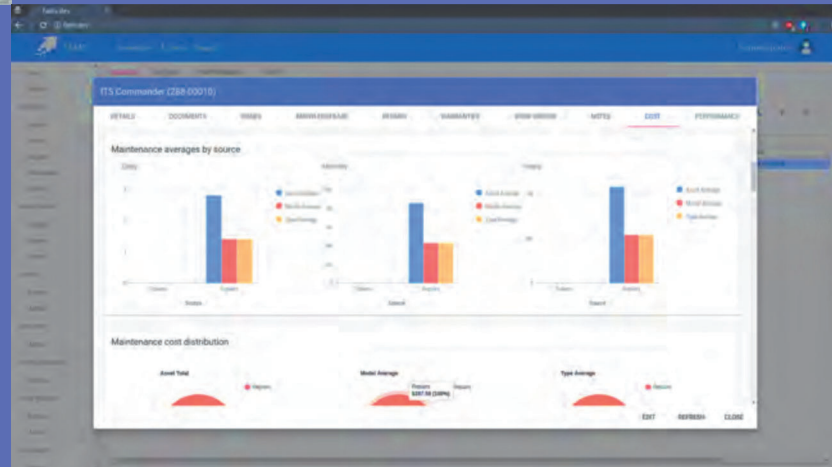

## Assets

- Track inventory and GIS (field) assets
- Document & manage cable runs, zones, devices directly on the map
- Full Google Maps integration
- Get directions or geolocate addresses/intersections
- Inventory audits with automatic corrections
- Keep track of inventory repairs and warranties
- Create circuit paths and dependency relationships
- Manage consumable procurements, allocations, and usages

## Performance & Cost Analytics

- Locate problematic inventory or field assets
- Keep track of asset costs from work orders or repairs
- Define custom performance metrics
- Share purchasing info to find low cost vendors
- Compare estimates to actual costs
- Compare assets to others of same models and types
- Get monthly/yearly maintenance estimates and averages
- Speed up common tasks like inventory audits and information lookups

## Collaboration

- Support for multiple agencies and groups
- Manage access rights for each agency and user
- Central document base with sharing capabilities
- Create knowledge-base articles for procedures and processes to share to users
- Email notifications from multiple modules
- Notify groups of events scheduled or in progress
- No longer worry about agencies having out-of-date documentation

## Flexible & Scalable

- Define multiple asset and work order life-cycles that fit your agencies business logic
- Three field asset classes allow for the creation of almost any type of asset
- Any desktop computer that supports Chrome web browser can access the software
- Change business logic anytime as policies are updated
- Update your IT infrastructure without worry of compatibility breaking your management solution
